Joining the Waubonsee Community College secure wireless network

You can join a secure wireless network if you have an AirPort card installed in your computer and you’re in range of the wireless network.

To join the WCC-Secure wireless network:

1. Choose Apple > System Preferences > Network, and then click Airport in the network connection services list at the left.

2. Choose the network named “WCC-Secure” from the Network pop-up menu.

3. Enter your X-number and password to join the secure network. Check the “Remember…” box so you don’t have to select the network each time you start up or wake your computer.
4. You can also use the AirPort icon in the menu bar to join the wireless network.
